Subject Index

Absorption measurements of radiographic intensifying screens, 212
Analysis, angiographic small signal, 324
Angiographic small signal analysis, 324
Angiography, computer model for assessing potential of rare-earth screens in magnification, 203
Annular transducer, grey scale processing for tissue differentiation with, 272
Anode thermal state on rotating anode x-ray tube ratings, effects of, 86
Anode x-ray tube ratings, effects of anode thermal state on rotating, 86
Anode x-ray tubes, loadability of rotating, 62
Anode x-ray tubes, thermal characteristics of rotating, 44
Application of digital image change detection to diagnosis and follow-up of cancer involving the lungs, 99
Applications, optimizing scan converters for ultrasound, 271
Approach and genesis, a purchase guideline for x-ray equipment—philosophy, 251
Arrays, gray scale imaging with complex TGC and transducer, 266
Arteries, densitometric assessment of stenoses in coronary, 337
Aspects of grayscale ultrasound, practical, 280
Assessing potential of rare-earth screens in magnification angiography, computer model for, 203
Assessment of stenoses in coronary arteries, densitometric, 337
Assurance—a fundamental whose time has come, quality, 138
Assurance in diagnostic radiology—why doesn't every department have a complete program?, quality, 122
Assurance in hospital radiology department, program for diagnostic x-ray quality, 151
Automatic exposure controls, characteristics and evaluation of, 189
Automatic exposure control, x-ray, 171
Automatic exposure timing and control circuitry, x-ray, 166
Automatic film processing in diagnostic radiology—problems and solutions, 33
Automatic processor, effect of development temperature changes in, 26
Axial tomography, effects of radiation parameters on computerized transverse, 294
Axial tomographic imaging system, physical measurements of the EMI computerized, 299
Axial tomography, image quality in computerized, 310

Basic quality control in a radiological facility, 145
Bid specifications and equipment purchasing, technique for development of, 249
Bone with ultrasound transaxial tomography, phantom studies of imaging soft tissue through, 317
Breast cancer detection, an evaluation of low light level television for, 384
Breast cancer diagnosis, current and potential capabilities of ultrasound imaging for, 372
Breast cancer screening programs, role of thermography in, 379
Bureau of Radiological Health, Food and Drug Administration, diagnostic x-ray program of, 1
Bureau of Radiological Health, rare-earth intensifying screen studies at, 202

Cancer detection, evaluation of low light level television for breast, 384
Cancer diagnosis, current and potential capabilities of ultrasound imaging for breast, 372
Cancer involving the lungs, application of digital image change detection to diagnosis and follow-up of, 99
Cancer screening programs, role of thermography in breast, 379
Capabilities of ultrasound imaging for breast cancer diagnosis, current and potential, 372
Capability of small focal spots, peak power, 65
Cardiology, the Roentgen densitometer—novel device for pediatric, 341
Cardiovascular system, intensifying screen speed—its impact on, 230
C.A.T.?, comparison of ultrasound and x-ray tomography ultrasound—a poor man's, 284
Causes of fog in radiographic film, 19
Centimeter wavelengths, thermographic imaging at millimeter and, 375
Certification program, operational material, 9

Change detection to diagnosis and follow-up of cancer involving the lungs, application of digital image, 99
Characteristics and evaluation of automatic exposure controls, 189
Characteristics and limitations of photographic films used in subtraction radiography, 92
Characteristics of rare-earth imaging systems, some physical, 224
Characteristics of rotating anode x-ray tubes, thermal, 44
Circuitry, x-ray automatic exposure timing and control, 166
Clinical imaging, optimization of grey scale, 289
Comparison of ultrasound and x-ray tomography ultrasound—a poor man's C.A.T.?, 284
Complex TGC and transducer arrays, gray scale imaging with, 266
Computerized axial tomographic imaging system, physical measurements of the EMI, 299
Computerized axial tomography, image quality in, 310
Computerized transverse axial tomography, effects of radiation parameters on, 294
Computer model for assessing potential of rare-earth screens in magnification angiography, 203
Consideration in heat loading of x-ray tubes, 74
Considerations for selecting screen-film systems, 4
Considerations on the falling load principle, 52
Considerations with use of rare-earth screens, radiographic system, 217
Control circuitry, x-ray automatic exposure timing and, 166
Control in diagnostic radiology, quality, 125
Control in a large teaching hospital, quality, 146
Control in a radiological facility, basic quality, 145
Control purposes using a random object distribution, focal spot measurements for quality, 154
Control?, quality, 132
Controls, characteristics and evaluation of automatic exposure, 189
Control?, why quality, 133
Control, x-ray automatic exposure, 171
Conventional generators and type M film, mammographic image quality and exposure levels using, 393
Converters for ultrasound applications, optimizing scan, 271
Coronary arteries, densitometric assessment of stenoses in, 337
Current and potential capabilities of ultrasound imaging for breast cancer diagnosis, 372
Curve, quantification of the xeroradiographic discharge, 364

Densitometer—a novel device for pediatric cardiology, the Roetgen, 341
Densitometric assessment of stenoses in coronary arteries, 337
Dental laser grid surface mapping, intra-oral, 347
Dependence effects on performance of phototimers, energy, 176
Detection, evaluation of low light level television for breast cancer, 384
Detection to diagnosis and follow-up of cancer involving the lungs, application of digital image change, 99
Development of bid specifications and equipment purchasing, technique for the, 249
Development temperature changes in automatic processor, effect of, 26
Device for pediatric cardiology, the Roentgen densitometer—a novel, 341
Diagnosis and follow-up of cancer involving the lungs, application of digital image change detection to, 99
Diagnosis, current and potential capabilities of ultrasound imaging for breast cancer, 372
Diagnostic radiologic equipment—a delicate interface between purchaser and supplier, performance specifications for, 238
Diagnostic radiology—problems and solutions, automatic film processing in, 33
Diagnostic radiology, quality control in, 125
Diagnostic radiology—why doesn't every department have a complete program?, quality assurance in, 122
Diagnostic x-ray program of the Bureau of Radiological Health, Food and Drug Administration, welcome from a cosponsor, 1
Diagnostic x-ray quality assurance in hospital radiology department, program for, 151
Differentiation with annular transducer, grey scale processing for tissue, 272
Digital image change detection to diagnosis and follow-up of cancer involving the lungs, application of, 99
Discharge curve, quantification of the xeroradiographic, 364
Distribution, focal spot measurements for quality control purposes using a random object, 154

Earth intensifying screen studies at Bureau of Radiological Health, rare-, 202
Effect of development temperature changes in automatic processor, 26
Effects of anode thermal state on rotating anode x-ray tube ratings, 86
Effects of radiation parameters on computerized transverse axial tomography, 294
Effects on performance of phototimers, energy dependence, 176
Electronic radiography for rapid non-invasive intervention in neurological surgery, 332
EMI computerized axial tomographic imaging system, physical measurements of the, 299
Energy dependence effects on performance of phototimers, 176
Equipment—delicate interface between purchaser and supplier, performance specifications for diagnostic radiologic, 238
Equipment—philosophy, approach and genesis, a purchase guideline for x-ray, 251
Equipment purchasing, technique for development of bid specifications and, 249
Evaluation of automatic exposure controls, characteristics and, 189
Evaluation of low light level television for breast cancer detection, 384
Evaluation of radiographic phototimers, field, 183
Exposure controls, characteristics and evaluation of automatic, 189
Exposure control, x-ray automatic, 171
Exposure levels using conventional generators and type M film, mammographic image quality and, 393
Exposure timing and control circuitry, x-ray automatic, 166

Facility, basic quality control in a radiological, 145
Falling load principle, considerations on the, 52
Field evaluation of radiographic phototimers, 183
Film, causes of fog in radiographic, 19
Film, mammographic image quality and exposure levels using conventional generators and type M, 393
Film processing in diagnostic radiology—problems and solutions, automatic, 33
Films used in subtraction radiography, characteristics and limitations of photographic, 92
Film systems, considerations for selecting screen-, 4
Focal spot measurements for quality control purposes using a random object distribution, 154
Focal spots, peak power capability of small, 65
Fog in radiographic film, causes of, 19
Follow-up of cancer involving the lungs, application of digital image change detection to diagnosis and, 99
Format images, quasi-real time improvement in small, 113
Fundamental properties of xeroradiographic images, some, 359
Fundamental whose time has come, quality assurance—a, 138

Generators and type M film, mammographic image quality and exposure levels using conventional, 393
Genesis, a purchase guideline for x-ray equipment—philosophy, approach and, 251
Gray scale imaging with complex TGC and transducer arrays, 266
Grayscale ultrasound, practical aspects of, 280
Grey scale clinical imaging, optimization, 289
Grey scale processing for tissue differentiation with annular transducer, 272
Grid surface mapping, intra-oral dental laser, 347
Guideline for x-ray equipment—philosophy, approach and genesis, a purchase, 251

Heat loading of x-ray tubes, consideration in, 74
Hospital physicists in performance specifications, role of, 244
Hospital, quality control in a large teaching, 146
Hospital radiology department, program for diagnostic x-ray quality assurance in, 151

Image change detection to diagnosis and follow-up of cancer involving the lungs, application of digital, 99
Image intensifiers, method for testing performance of, 162
Image quality and exposure levels using conventional generators and type M film, mammographic, 393
Image quality in computerized axial tomography, 310
Images, quasi-real time improvement in small format, 113
Images, some fundamental properties of xeroradiographic, 359
Imaging at millimeter and centimeter wavelengths, thermographic, 375
Imaging for breast cancer diagnosis, current and potential capabilities of ultrasound, 372
Imaging, optimization of grey scale clinical, 289
Imaging soft tissue through bone with ultrasound transaxial tomography, phantom studies of, 317
Imaging system, physical measurements of the EMI computerized axial tomographic, 299
Imaging systems, some physical characteristics of rare-earth, 224
Imaging with complex TGC and transducer arrays, gray scale, 266
Impact on cardiovascular system, intensifying screen speed, 230
Improvement in small format images, quasi-real time, 113
Intensifiers, method for testing performance of image, 162
Intensifying screens, absorption measurements of radiographic, 212
Intensifying screen speed—its impact on cardiovascular system, 230
Intensifying screen studies at Bureau of Radiological Health, rare-earth, 202

Intervention in neurological surgery, electronic radiography for rapid non-evasive, 332
Intra-oral dental laser grid surface mapping, 347

Large teaching hospital, quality control in a, 146
Laser grid surface mapping, intra-oral dental, 347
Levels using conventional generators and type M film, mammographic image quality and exposure, 393
Level television for breast cancer detection, evaluation of low light, 384
Light level television for breast cancer detection, evaluation of low, 384
Limitations of photographic films used in subtraction radiography, characteristics and, 92
Loadability of rotating anode x-ray tubes, 62
Loading of x-ray tubes, consideration in heat, 74
Load principle, considerations on the falling, 52
Low light level television for breast cancer detection, evaluation of, 384
Lungs, application of digital image change detection to diagnosis and follow-up of cancer involving the, 99

Magnification angiography, computer model for assessing potential of rare-earth screens in, 203
Mammographic image quality and exposure levels using conventional generators and type M film, 393
Manufacturer's point of view, performance specifications from the, 248
Mapping, intra-oral dental laser grid surface, 347
Material certification program, operational, 9
Measurements for quality control purposes using a random object distribution, focal spot, 154
Measurements of radiographic intensifying screens, absorption, 212
Measurements of the EMI computerized axial tomographic imaging system, physical, 299
Method for testing performance of image intensifiers, 162
Millimeter and centimeter wavelengths, thermographic imaging at, 375
Model for assessing potential of rare-earth screens in magnification angiography, computer, 203

Neurological surgery, electronic radiography for rapid non-invasive intervention in, 332
Noise, physical theory of xeroradiography and observation of photon, 352
Non-invasive intervention in neurological surgery, electronic radiography for rapid, 332
Novel device for pediatric cardiology, Roentgen densitometer—a, 341

Object distribution, focal spot measurements for quality control purposes using a random, 154
Observation of photon noise, physical theory of xeroradiography and, 352
Operational material certification program, 9
Optimization of grey scale clinical imaging, 289
Optimizing scan converters for ultrasound applications, 271

Parameters on computerized transverse axial tomography, effects of radiation, 294
Peak power capability of small focal spots, 65
Pediatric cardiology, Roentgen densitometer—a novel device for, 341
Performance of image intensifiers, method for testing, 162
Performance of phototimers, energy dependence effects on, 176
Performance specifications for diagnostic radiologic equipment—delicate interface between purchaser and supplier, 238
Performance specifications from the manufacturer's point of view, 248
Performance specifications from the radiologist's perspective, 242
Performance specifications, role of hospital physicists in, 244
Perspective, performance specifications from the radiologist's, 242
Phantom studies of imaging soft tissue through bone with ultrasound transaxial tomography, 317
Philosophy, approach ang genesis, a purchase guideline for x-ray equipment—, 251
Photographic films used in subtraction radiography, characteristics and limitations of, 92
Photon noise, physical theory of xeroradiography and observation of, 352
Phototimers, energy dependence effects on performance of, 176
Phototimers, field evaluation of radiographic, 183
Phototimers, user's point of view, 196
Physical characteristics of rare-earth imaging systems, some, 224
Physical measurements of the EMI computerized axial tomographic imaging system, 299
Physical theory of xeroradiography and observation of photon noise, 352
Physicists in performance specifications, role of hospital, 244
Point of view, performance specifications from the manufacturer's, 248
Point of view, phototimers, user's, 196
Poor man's C.A.T.?, comparison of ultrasound and x-ray tomography ultrasound—a, 284
Potential capabilities of ultrasound imaging for breast cancer diagnosis, current and, 372
Potential of rare-earth screens in magnification angiography, computer model for assessing, 203
Power capability of small focal spots, peak, 65
Practical aspects of grayscale ultrasound, 280
Principle, considerations on the falling load, 52
Problems and solutions, automatic film processing in diagnostic radiology—, 33
Processing for tissue differentiation with annular transducer, grey scale, 272
Processing in diagnostic radiology—problems and solutions, automatic film,33
Processor, effect of development temperature changes in automatic, 26
Program for diagnostic x-ray quality assurance in hospital radiology department, 151
Program of Bureau of Radiological Health, Food and Drug Administration, diagnostic x-ray, 1
Program, operational material certification, 9
Programs, role of thermography in breast cancer screening, 379
Progress in radiology?, rare-earth screens, real, 209
Properties of xeroradiographic images, some fundamental, 359
Purchase guideline for x-ray equipment—philosophy, approach, genesis, 251
Purchaser and supplier, performance specifications for diagnostic radiologic equipment—delicate interface between, 238
Purchasing, technique for development of bid specifications and equipment, 249

Quality and exposure levels using conventional generators and type M film, mammographic image, 393
Quality assurance—fundamental whose time has come, 138

Screen-film systems, considerations for selecting, 4
Screening programs, role of thermography in the breast cancer, 379
Screens, absorption measurements of radiographic intensifying, 212
Screens in magnification angiography, computer model for assessing potential of rare-earth, 203
Screen speed—its impact on cardiovascular system, intensifying, 230
Screens, radiographic system considerations with use of rare-earth, 217
Screens, real progress in radiology?, rare-earth, 209
Selecting screen-film systems, considerations for, 4
Signal analysis, angiographic small, 324
Small format images, quasi-real time improvement in, 113
Soft tissue through bone with ultrasound transaxial tomography, phantom studies of imaging, 317
Solutions, automatic film processing in diagnostic radiology—problems &, 33
Some fundamental properties of xeroradiographic images, 359
Some physical characteristics of rare-earth imaging systems, 224
Specifications and equipment purchasing, technique for the development of bid, 249
Specifications for diagnostic radiologic equipment—delicate interface between purchaser and supplier, performance, 238
Specifications from manufacturer's point of view, performance, 248
Specifications from radiologist's perspective, performance, 242
Specifications, role of hospital physicists in performance, 244
Speed—its impact on cardiovascular system, intensifying screen, 230
Spot measurements for quality control purposes using a random object districution, focal, 154
Spots, peak power capability of small focal, 65
Stenoses in coronary arteries, densitometric assessment, 337
Studies at Bureau of Radiological Health, rare-earth intensifying screen, 202
Studies of imaging soft tissue through bone with ultrasound transaxial tomography, phantom, 317
Subtraction radiography, characteristics and limitations of photographic films used in, 92
Supplier, performance specifications for diagnostic radiologic equipment—delicate interface between purchaser and, 238
Surface mapping, intra-oral dental laser grid, 347
Surgery, electronic radiography for rapid non-invasive intervention in neuorological, 332
System considerations with use of rare-earth screens, radiographic, 217
System, intensifying screen speed—its impact on cardiovascular, 230
System, physical measurements of the EMI computerized axial tomographic imaging, 299
Systems, considerations for selecting screen-film, 4
Systems, some physical characteristics of rare-earth imaging, 224

Teaching hospital, quality control in a large, 146
Technique for development of bid specifications and equipment purchasing, 249
Television for breast cancer detection, evaluation of low light level, 384
Temperature changes in automatic processor, effect of development, 26
Testing performance of image intensifiers, method for, 162
TGC and transducer arrays, gray scale imaging with complex, 266
Theory of xeroradiography and observation of photon noise, physical, 352
Thermal characteristics of rotating anode x-ray tubes, 44
Thermal state on rotating anode x-ray tube ratings, effects of anode, 86
Thermographic imaging at millimeter and centimeter wavelengths, 375
Thermography in breast cancer screening programs, role of, 379
Time improvement in small format images, quasi-real, 113
Timing and control circuitry, x-ray automatic exposure, 166
Tissue differentiation with annular transducer, grey scale processing for, 272
Tissue through bone with ultrasound transaxial tomography, phantom studies of imaging soft, 317
Tomographic imaging system, physical measurements of the EMI computerized axial, 299
Tomography, effects of radiation parameters on computerized transverse axial, 294
Tomography, image quality in computerized axial, 310
Tomography, phantom studies of imaging soft tissue through bone with ultrasound transaxial, 317
Tomography ultrasound—poor man's C.A.T.?, comparison of ultrasound and x-ray, 284
Transaxial tomography, phantom studies of imaging soft tissue through bone with ultrasound, 317
Transducer arrays, gray scale imaging with complex TGC and, 266
Transducer, grey scale processing for tissue differentiation with annular, 272
Transverse axial tomography, effects of radiation parameters on computerized, 294
Tube ratings, effects of anode thermal state on rotating anode x-ray, 86
Tubes, consideration in heat loading of x-ray, 74
Tubes, loadability of rotating anode x-ray, 62
Tubes, thermal characteristics of rotating anode x-ray, 44

Ultrasound and x-ray tomography ultrasound—poor man's C.A.T.?, comparison of, 284
Ultrasound applications, optimizing scan converters for, 271
Ultrasound imaging for breast cancer diagnosis, current and potential capabilities of, 372
Ultrasound—poor man's C.A.T.?, comparison of ultrasound and x-ray tomography, 284
Ultrasound, practical aspects of grayscale, 280
Ultrasound transacial tomography, phantom studies of imaging soft tissue through bone with, 317
User's point of view, phototimers, 196

Wavelengths, thermographic imaging at millimeter and centimeter, 375
Welcome from a cosponsor—diagnostic x-ray program of Bureau of Radiological Health, Food and Drug Administration, 1
Why quality control?, 133

Xeroradiographic discharge curve, quantification of the, 364
Xeroradiographic images, some fundamental properties of, 359
Xeroradiography and observation of photon noise, theory of, 352
X-ray automatic exposure control, 171
X-ray automatic exposure timing and control circuitry, 166
X-ray equipment—philosophy, approach, genesis, purchase guideline for, 251
X-ray program of Bureau of Radiological Health, Food and Drug Administration, diagnostic, 1
X-ray quality assurance in hospital radiology department, program for diagnostic, 151
X-ray tomography ultrasound—poor man's C.A.T.?, comparison of ultrasound and, 284
X-ray tube ratings, effects of anode thermal state on rotating anode, 86
X-ray tubes, consideration in heat loading of, 74
X-ray tubes, loadability of rotating anode, 62
X-ray tubes, thermal characteristics of rotating anode, 44
